

My Regulation Toolkit *Worksheet*

A fillable companion resource to the My Regulation Toolkit: Teen Girls Edition

DATE COMPLETED

YOUR NAME

HOW TO USE THIS WORKSHEET

Work through this after completing the My Regulation Toolkit tool and watching the course videos.

Your sensory results from the tool are your starting point. Use them to guide your answers.

This is a fillable PDF. Type your answers directly into the fields, then save the file. Open in Adobe Acrobat, Preview (Mac), or any PDF reader that supports form fields.

Return to it any time. Your answers may shift as your nervous system changes.

WHAT'S INSIDE

- **My Sensory Patterns:** Describe your sensory experience and identify key triggers
- **My Window of Capacity:** Map your high and low energy states and early warning signs
- **My Regulation Toolkit:** Record your go-to tools for up and down regulation
- **What I Want Others to Understand:** Notes for your family, school, and healthcare team
- **One Thing I Am Taking Away:** Your single most useful insight from this process

MY SENSORY PATTERNS

Use your results from the My Regulation Toolkit tool as a starting point for this section.

In my own words, my sensory experience is...

How would you describe your sensory world to someone who knows you well?

The sensory situations that reliably shift me outside my window, or keep me stuck there, are...

e.g. crowded corridors, the school canteen at lunch, unexpected changes, bright lights, noise, itchy clothing...

I notice my sensory sensitivity changes at these times...

e.g. the week before my period, when I haven't slept well, during exam periods, after busy social weeks...

MY WINDOW OF CAPACITY: WHAT I NOTICE

Tip: to identify your state, pause and notice your feelings, thoughts, behaviours, and body sensations in the moment.

High energy, activated, reactive, overwhelmed: you are likely above your window in a high energy state.

Low energy, flat, foggy, withdrawn: you are likely below your window in a low energy state.

When I am in a HIGH ENERGY state, I notice...

When I am in a LOW ENERGY state, I notice...

My early warning signs that my window is narrowing (before I fully tip out) are...

e.g. my jaw tightens, I get snappy at small things, I go very quiet, I start avoiding people, my heart beats faster...

MY REGULATION TOOLKIT

List the tools that actually work for you, not the ones you think should work. Use your personalised results from the tool as a reference for ideas matched to your specific sensory preferences.

When I am in a HIGH ENERGY STATE and want to come back into my window:

REGULATION TOOL	THOUGHT / REMINDER
1	
2	
3	

When I am in a LOW ENERGY STATE and want to come back into my window:

REGULATION TOOL	THOUGHT / REMINDER
1	
2	
3	

MY FASTEST REGULATING TOOLS (THE ONES I REACH FOR FIRST, IN ANY STATE):

e.g. weighted blanket, a short walk outside, cold water on my wrists, a specific playlist, deep pressure, movement, peppermint, silence, my pet...

WHAT I WANT THE PEOPLE AROUND ME TO UNDERSTAND

This section is optional, but often the most powerful. Use it to prepare for conversations, share with someone who supports you, or bring to a healthcare appointment.

For my family or close friends:

What do you most want them to know about your sensory experience?

For my school or study environment:

What adjustments or understanding would make the most difference for you at school?

For my healthcare team (GP, OT, therapist, paediatrician):

What do you want them to know about how your sensory system works?

ONE THING I AM TAKING AWAY FROM THIS

What is the single most useful insight or shift from working through this process?

Return to this worksheet whenever your sensory experience shifts: after a new school year, a hormonal change, or a significant period of stress. Your nervous system changes over time, and so will your toolkit.
